

AI Scribe

Turn every patient conversation into a complete, reimbursement-ready note.

Avo's AI Scribe transcribes patient-provider interactions in real-time with ambient listening at the point-of-care.

Content **Ambient Listening**

Start recording to transcribe conversations in real time, extract and generate notes. Ambient Listening is HIPAA secured. ⓘ

50+ languages & 3+ participants

AI Scribe accurately captures interactions with child, parent, translator, and clinician in over 50 languages.

Integrates clinical context into every note

From the conversation, AI Scribe creates a detailed history of present illness (HPI), clinical history, assessment and plan (A/P), differential diagnosis, problem list, and other documentation that captures the patient's full context.

“ Since implementing Avo AI Scribe, my after-hours documentation has drastically improved: accurate summaries, less time charting, better work-life balance. It's AI that actually works for the clinician and it's making a real impact.

AI Scribe + E&M Optimizer

Maximize reimbursement and reduce billing cycles with AI-powered E&M Optimization.

After AI Scribe generates a note, E&M Optimizer reviews it in real time in the EHR, flagging gaps and suggesting smarter code selections so clinical teams capture full reimbursements.

Under-coding leaves significant revenue on the table.

Outpatient & inpatient providers chronically under-code Level 4/5 visits because documentation doesn't capture the medical decision-making complexity they actually performed. The average practice loses ~\$125,000/year to coding errors.

Avo's E&M Optimizer generates smart code recommendations in real-time.

E&M Optimizer evaluates documentation against the 2021/2023 E&M guidelines, flags gaps that would force a downcode, and proposes specific language additions so the clinician can sign at the appropriate level.

The clinician keeps the pen. Avo never auto-codes.

Generates time-based billing statements and clinically relevant documentation, enhancing clinician documentation and allowing more accurate Evaluation & Management CPT coding.

Current Billing Level (Estimated):

- CPT Code: 99232
- Level: 3
- Clinical Setting: Inpatient
- Note Type: Progress
- Provider Type: Primary

If You Spent Enough Time, Time-Based Billing May Be More Appropriate:

Collapse All

Total Time Spent Today on Inpatient Follow-Up

Includes both face-to-face and non-face-to-face activities such as reviewing records, counseling, and documentation.

- ☐ 25-34 minutes ☐ 35-49 minutes ☐ 50 minutes+

Append **Documentation To Apply** to the **A/P** section

Apply to Note

Avo helps the billing department because they're not having to dig through our notes. It's almost to the point where we don't necessarily need to use it on every single encounter. It's shown me enough about my own notes to help me better categorize levels.
